

CLive

The future of seamless connectivity and management of IP devices

Introducing CLive Cloud-Based Services

Designed and developed for our carrier and VoIP service partners, Apivio's newly introduced platform, CLive, delivers next generation VoIP services that enhance basic call features on hardware from the cloud.

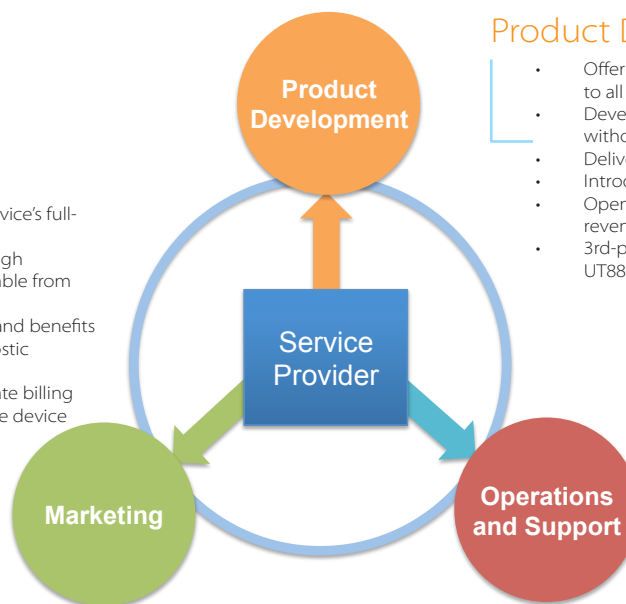

The Ultimate VoIP Solution for Service Providers

Serving as Apivio's own cloud-based provisioning and troubleshooting system, CLive changes the game for Service Providers by enabling services that improve the usability and utility of devices for their business and their users.

Marketing

- Allows custom branding on device's full-color touch screen
- Differentiates your brand through customized offerings not available from competitors
- Delivers value-added services and benefits
- Generates user's device diagnostic information to support
- Integrates services for up-to-date billing and usage information from the device

Product Development

- Offer commercial solutions and custom feature sets to all customers
- Develop unique client and server-side features without requiring new R&D investment
- Deliver SMS, Video and Android-based apps
- Introduce subscription model for apps
- Open up 3rd-party app developers for possible revenue share
- 3rd-party Call Control to build apps that can access UT880's OS-level APIs

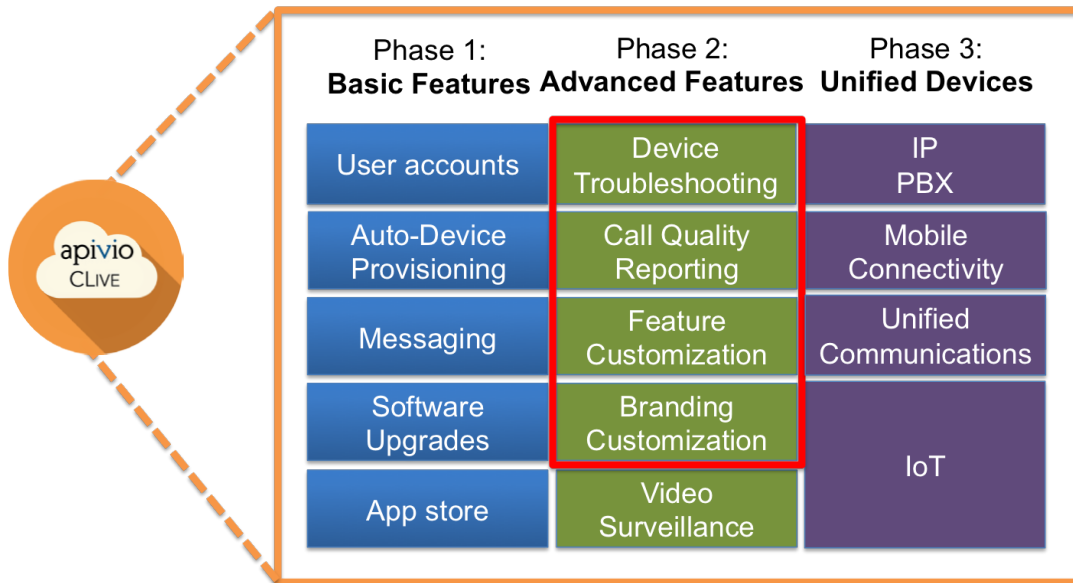

Operations & Support

- No-touch device provisioning out of the box using the cloud
- Pro-active monitoring of network characteristics
- Automated data capture when calls are not working
- Real-time troubleshooting (e.g. ACK not received)

The Future of VoIP is IoT

At Apivio, we continuously look to leap our technology forward. As the Internet of Things (IoT) continues to evolve to new areas, our R&D team is developing CLive to seamlessly connect and control a range of peripheral devices within the enterprise or at home. Simply put, our goal is to lead the creation of a ubiquitous VoIP services ecosystem for the office, the home and the road.

Leap Forward with Apivio
